

Design?

Login

Sign up

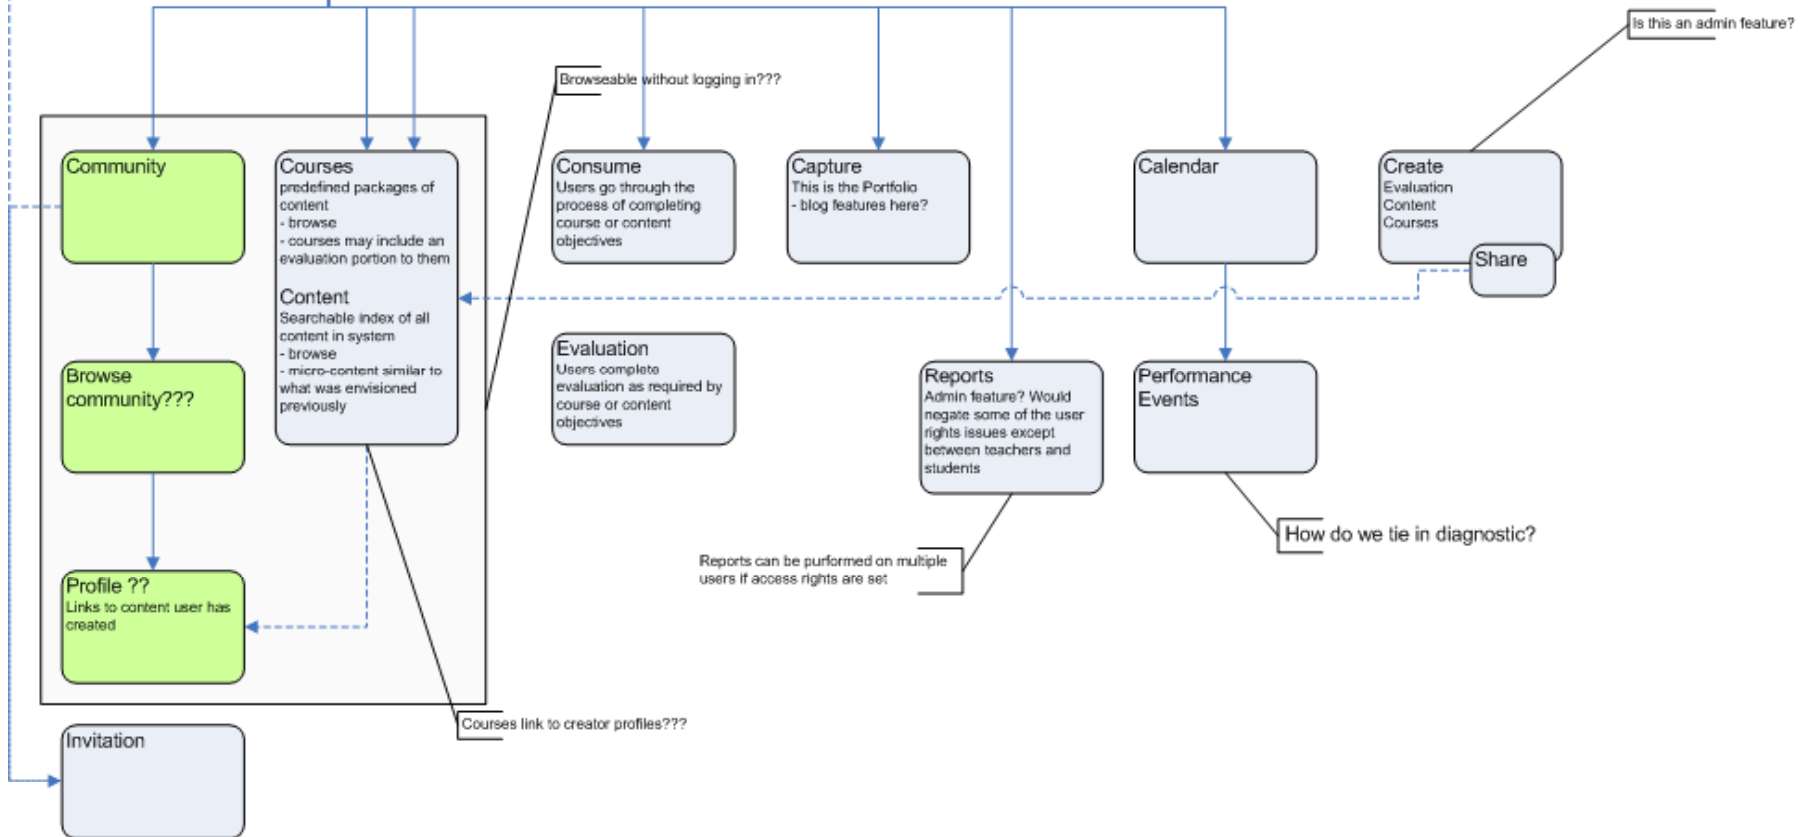

Users are all the same but the signup offers dashboard "profiles"
- offer a way to describe learning topics of interest
- include quick self-description as a way for people to connect (like LinkedIn)
Does this get separated out into the core? Same with Login?

Dashboard

Context sensitive navigation - items will be unavailable until required tasks are completed
- provide links to resources based on topics of interest from sign up as well as any previously consumed content
- links to feeds
- links to invite users
- links to del.icio.us or other resources?

SHELL

- owned by a single entity
- more likely to follow the school>manager>teacher>student methodology

Colour Contrast Check

Date created: January 11, 2005

Date last modified: February 14, 2005

[Visit the discussion](#)

The Colour Contrast Check Tool allows to specify a foreground and a background colour and determine if they provide enough of a contrast "when viewed by someone having color deficits or when viewed on a black and white screen"[\[W3C\]](#).

The tool will indicate that the colours pass the test if both the colour difference and the brightness difference exceed their threshold. It will indicate that it sort of passes if only one of the two values exceed their threshold. And finally, it'll fail to pass if neither value exceeds its threshold.

You can enter a three character value (eg: 036) and it'll automatically convert it to it's six character version.

Foreground Colour:

Background Colour:

Spam Filtering in MovableType 3.2

January 06, 2006 | [Permanent Link](#) | [Comments \(0\)](#)

People seemed to jump off the MovableType bandwagon when the comment spam started getting out of hand. Having stuck with MovableType myself, I've come to discover the new spam filtering power that is currently available. Bundled with a standard install... QUICK LINKS

December 29, 2005 | <#> | [1 Comments](#)
Lokesh Dhakar sent me his unobtrusive JavaScript-based image popup, called [Lightbox JS](#). I like the feel of the result although the execution feels a little jumpy in Firefox. A smoother transition and a way to cancel the image (or at least hide the overlay) before it has loaded would be nice features.

December 27, 2005 | <#> | [3 Comments](#)
Just wanted to bookmark this little script: [Make Internal Links Scroll Smoothly with JavaScript](#). If a user clicks a link to an on-page anchor, it'll scroll the page instead of jumping directly to the spot.

December 20, 2005 | <#> | [0 Comments](#)
A few interesting things from fellow 9rules and I thought it easier to bundle them up into one quick post. [Matt Brett creates PSD and AI files for the feed icon used in Firefox](#) and the Internet Explorer 7. [Matthew Cahill](#), recently inducted into 9rules, has a nice site—love the topics in the sidebar. And Roger of 456 Berea Street links to a few of his [favourites for the year](#) (might have been easier just to link to the Archives page).

December 16, 2005 | <#> | [4 Comments](#)
In Andy Clarke's entry at 24 ways, "[Z's not dead baby, Z's not dead](#)", he describes using z-index and absolutely position elements within a relative container. I've used this on projects in the past (with alpha PNG's) and it works well. [Older versions of Safari and Netscape have issues under certain edge cases](#).

December 14, 2005 | <#> | [0 Comments](#)
If you consider yourself a JavaScript master and live close to Palo Alto (that's in California), Facebook is looking for you. [Check out Avalonstar for more info](#).
